Dear Hiring Manager,

I am writing to express my strong interest in the **Lead Engineer** position. With over **eight years of experience** delivering enterprise-scale Java Spring Boot microservices across the BFSI, e-commerce, and CRM domains, I specialize in building resilient, cloud-native architectures that drive measurable business outcomes.

Throughout my career, I have architected and deployed robust microservice platforms leveraging the **Spring ecosystem (Spring Boot, Spring Cloud, Spring AI, Data JPA)** alongside **AWS and Docker**. My technical focus centers on creating production-ready services that prioritize high availability, security, and observability. I have a proven track record of designing fault-tolerant systems using **Resilience4j** and API gateway patterns, optimizing relational and non-relational databases (**Oracle, PostgreSQL, MongoDB**), and building secure API access layers using **OAuth2/OIDC and Keycloak**.

Operational excellence and engineering quality are central to my leadership approach. I routinely implement end-to-end observability frameworks using **ELK, Jaeger, and Prometheus/Grafana**, and accelerate delivery cycles by designing automated **CI/CD pipelines via Jenkins, GitLab CI, and Kubernetes**. Beyond my technical contributions, I am passionate about mentoring engineers and collaborating across product, UX, and DevOps teams to deliver high-quality software.

I am available for an interview immediately and would welcome the opportunity to discuss how my background aligns with your team's goals. My project portfolio, code samples, and professional references are available upon request.

Thank you for your time and consideration.

Sincerely,
Milan Kumar Maharana
